
The DX Bulletin

Issue 71 January 5, 1981

HOT NEWS? CALL THE DX BULLETIN: 203-871-6251; LEAVE A MESSAGE!

PROPAGATION: January 3-8, High Normal; Jan. 9, Above Normal; Jan. 10, 11, High Normal. TNX N4XX.

ARRL DX ADVISORY COMMITTEE

ARRL President Harry J. Dannels, W2HD, has announced the ARRL DXAC line-up for 1981, with three changes from 1980.

John Kanode, N4MM, who has been the representative from the Fourth Call Area, has been elected Roanoke Division vice-director for 1981-82, and concurrently has been appointed the Board liaison to the DXAC. He is replaced as DXAC member by David Novoa, KP4AM.

Ed Kuebert, K3KA, is the new Third Call Area DXAC member, taking over for James Douglas, W3ZN. The appointments are for two years.

Continuing on the DXAC are W1OT, W2QM, K5YY (chairman), N6RJ, K7LAY, WB8EUN, N9MM, W0SR, and VE3QA.

There is always some confusion as to the powers and responsibilities of the various ARRL advisory committees. The members are appointed by the League president, in consultation with paid headquarters staff members and board members. The advisory committee posts are entirely voluntary and without compensation. Applications are solicited from the membership and the decisions are made on the basis of expertise, experience, etc.

The board liaison to the advisory committee is a board member conversant in the particular subject area. Each year, the chairman of each advisory committee files

a report of the committee's activities for the year, which the liaison board member presents at the annual board meeting.

A letter or other correspondence addressed to the DXAC and mailed to ARRL headquarters is copied for each DXAC member and for the board liaison. You may receive a reply from your area DXAC representative, from the headquarters, or both.

Each advisory committee has a paid staff liaison who handles the paperwork of distribution to the committee. The headquarters liaison often functions as an ex-officio, non-voting member of the advisory committee.

While advisory committee recommendations can be overridden by staff or the Board, ideally they are not. In the case of the DXAC, the makeup and thinking of the DXAC membership has great bearing on what is accepted as a new country and what is not, as well as rules interpretations.

While each committee has "hangers-on" who do nothing, all have members who do considerable work with no thanks whatsoever, except for fleeting fame. All the advisory committees need input from their constituencies. A letter to them with a copy to your favorite DX publication goes a long way toward shaping the face of DXing.

The DX Bulletin is a weekly publication devoted to news of interest to DXers worldwide. *The DX Bulletin* is affiliated with no other publication or organization and is independently published by DXers, for DXers. Yearly subscription rates are \$26 US, VE and XE, \$35 all others (air mail). Address all correspondence to *The DX Bulletin*, 306 Vernon Avenue, Vernon, CT 06066 USA. Printed in the USA by *The DX Bulletin*. May be quoted or excerpted without prior permission provided TDXB is credited.

The DX Bulletin

January 5, 1981

SHAKE DJIBOUTI

In Issue 70 it was stated that Dave Gardner, K6LPL, made 3,000 contacts as J28LP, which was incorrect. Actually, Dave worked CW from Jordan, as JY8LP, and racked up 3K code contacts. The editor regrets the error.

Also in Issue 50, QSL manager for 9G1RT (and his other calls) is KB7HB, not KB7HN. But the name and address given were correct.

N2KK AFRICA

Dave Schoen was on from the South Sudan for one day, December 23, signing 6UØKK, before his equipment was reportedly confiscated. He has not been heard from since, and it is assumed he will reappear from either N. Yemen or Chad.

The civil war in Chad is somewhat winding down at this time. N4HX/TT8 has been appearing very sporadically from there.

SOUTH SANDWICH

A rumored trip to S. Sandwich by various LU operators has reportedly been scrapped, according to the grapevine. LU1DZ was the leader of an operation which would have started about Jan. 5, but financial problems caused the effort to run aground.

LU3ZY there has been very silent of late. QSL cards continue to dribble in. Some come from LU1BR, LU3ADX and LU2AFH; LU2CN has not been a productive route.

COCOS-KFELING

That new novice is VK9NYG, who shows on 10 Meters SSB at 1200-1300Z. That is an excellent time for Europeans and Japanese DXers but not much use for North America, although with the bands in their present state who knows! Next week's issue of TDXB will feature a picture story on the continuing efforts of VK5QX and VK9CCT to put C-K on the air more regularly, with a bigger signal.

SAN ANDRES

W9UCW, Barry Boothe, expects to activate HKØCOP now through the 18th. His favorite haunt is 160 Meters.

KV4AA

Dick Spenceley, KV4AA, has been up to his usual tricks again. He was heard on Christmas day saying he had limited himself to 25,000 contacts for 1980, and he had cut down to 30 a day during December. On 12/25 he made QSO #24,830.

CARIBBEAN (and other) EXPEDITIONS

Following WB3GPR's Grand Cayman operation last week, Iowans Gary Ernst, KØGVB and Bob Lucas, WAØDXZ, will operate ZF2DX January 15 to about the 22nd. They will use a pair of FT101E radios for a special attack at the 73 160 Meter Phone Contest on the 17th and 18th. QSLs to KØGVB, RFD 2, West Branch, IA 52358.

Robin and Mel Stoller, WB2JVM and K2AOQ respectively, will sign VP2KAP and VP2KAO from St. Kitts Feb. 2-7. Both have Extra class tickets, and they will concentrate their operating on CW 26 KHz up from the band edges and on phone at various spots. QSLs to 51 Allandale Ave., Rochester NY 14610.

Look for JA8JL and JA8DNZ to be working 10 Meters only, 28025 and 28595, from the Republic of Palau in the West Carolines group the first of January.

4U1ITU operations recently were by W3ICM in the CQ WW CW Contest and by W3JPT in the ARRL 10 Meter Contest. Cards have already been sent to all contacts via the bureaus, but faster service can be obtained if you're desperate by way of an SASE to either operator for his stint at ITU headquarters.

At presstime, the S. Sandwich run by VP8PP and friends did not look good. Nothing had been heard from them at S. Georgia, on their way to S.S. If they did make it, perhaps late, VP8SSI should be on approximately NOW.

The DX Bulletin

January 5, 1981

Some of the JYs have been hinting on the air that the YIIJY operation in early February might be supplanted by a brief mid-January sojourn to S. Yemen or N. Yemen. The intricacies of Mid-East politics would seem to make anything possible. Beware!

600DX cards from I2YAE seem to be arriving in reverse order; those having worked Guiseppe in October and November are getting cards while those who made contact last summer still are waiting.

That CR9CT at the end of December was by Phil Weaver, VS6CT, who worked only 20, 15, and 10 Meters. G3KDB mgr.

Several readers have inquired as to they might get on one of those "Crap Lists" (Issue 69). Not wishing to cast stones in any direction we will leave it to the imagination. After all, this is a Family bulletin, and the Hour is not right.

And there is the guy who continually crows about how he is going to make 5-Band DXCC all on phone only. Oh, the glory of it all! What he really means is he doesn't know the Code anymore.

BV2A has been pretty consistent on 14025 Wednesdays at 1300Z, for an hour or more. His signal drifts.

TL8WH has an 80 Meter dipole up and operates around his sunrise time of 0440Z. That time doesn't change much through the year, due to the Central African Republic straddling the Equator.

Turkish correspondent TA2FM will shortly have a Stateside QSL manager. Since his last letter to us back in October, further civil unrest has resulted in almost complete lack of amateur radio activity, except for TA1UA and TA2TAT. QSLs from those two are received very promptly, however.

*****Ergonomics:** the science that seeks to adapt work or working conditions to suit the worker.

Last issue's comments on the Drake TR-7 have already brought several phone calls in response. Personally, we have been interested in the science of ergonomics for some time, specifically as it applies to automobiles. Isn't it amazing that Detroit continues to try to sell cars which do not have an adjustable backrest for the driver? And how about the ones where the steering wheel blocks the view of the instrument panel?

It is like the engineers who design the cars don't drive (shades of Ralph Nader!). The same seems to apply to some radios, also. Take that wonderful new design of the CDR rotor control box, the one where you have to push two buttons to turn the antenna, and you have to hold the buttons down for the duration of rotation. The "D-Lay-5" has a fix for that (Issue 67).

Maybe we are just idealists, but the glitches in the TR-7 pointed out last week could be eliminated for ten bucks' worth of parts, and could have been found by having an operator sit at the radio for a half-hour. And have you noticed how the Heathkit ads never show a key or paddle? They still have not discovered RIT, either.

Those who assemble their antennas on top of the tower, piece by piece, have done a lot of tooth grinding over the decades as a result of antenna designs which make the task next to impossible. Notice how the antenna ads always show an unguyed tower and/or using a crane (\$100/hour) to ease erection?

When operators are involved in the design of radios, the results are clear. Dick Frey of Ten Tec and Dick Ehrhorn of Alpha come immediately to mind, but surely there are more.

We are going to visit the owner of a new Collins KWM-380 soon and will give our impressions if anyone is interested. Say the word.
